

The Solar-Powered Attic Fan That Pays For Itself.

Heat And Moisture Are Your Attic's Worst Enemy.

Research has proven that heat and moisture are every attic's worst enemy. While many homes have small passive vents, most are ineffective in moving enough air to expel heat and moisture. Solar Star attic fans are technologically advanced with a "run by the sun" solution for both problems.

Most electric powered attic ventilators are engaged by a thermostat, so they only work when attic temperatures have already built up. Because of this, thermostat activated units are forced to play catch up with that built-up

- Costs nothing to operate.
- Protects roof structure.
- Installs in less than 30 minutes
- 5 year warranty on motor and solar panel; 10 year warranty on all other components.
- Meets Florida Building Code
- Made in the U.S.A.

heat. Other systems may only have a humidistat measuring the moisture level in an attic. This too is a problem because when humidity levels reach the preset activation level, condensation and moisture have already reached a critical point.

The solution is Solar Star. Solar Star doesn't have the costly problem of replacing thermostats or humidistats like electric ventilators. And since Solar Star functions from sunup to sundown, humidity and temperature levels never reach those critical activation levels. The result is a properly ventilated attic which prolongs your roof's life, lowers your utility costs, and makes your living environment comfortable.

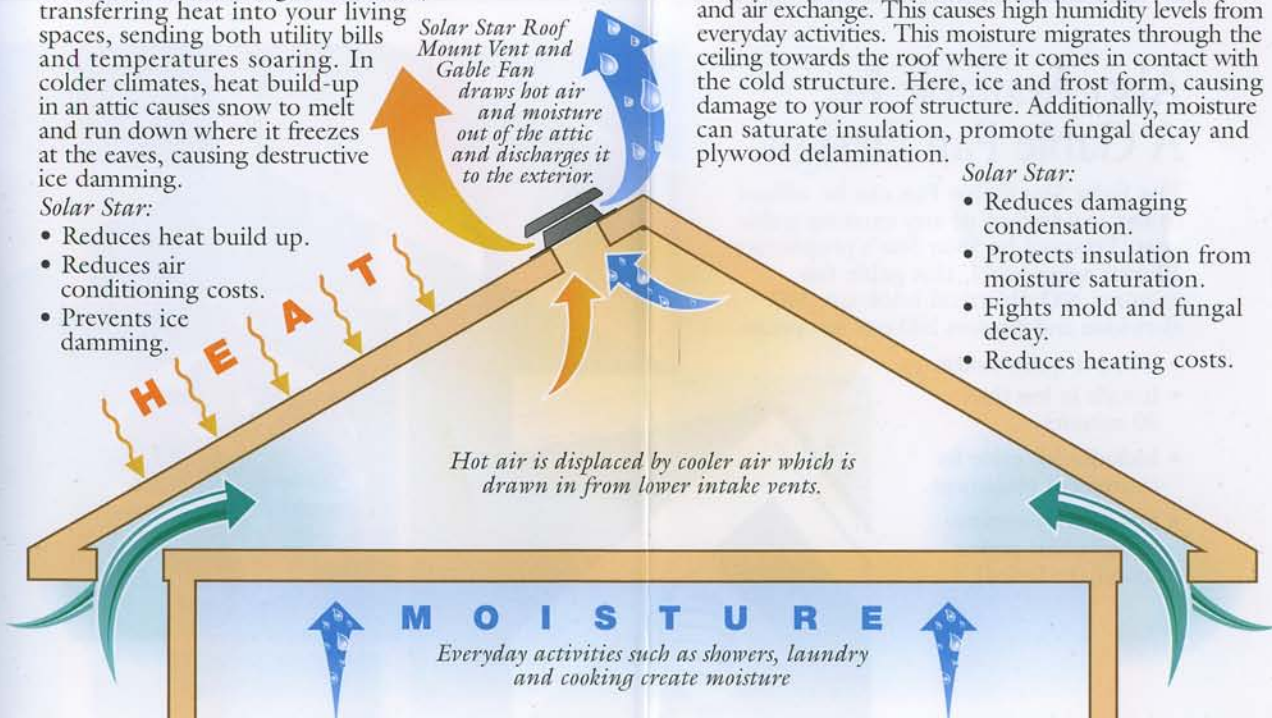

Suppress Heat Build Up.

A hot attic acts like a giant radiator, transferring heat into your living spaces, sending both utility bills and temperatures soaring. In colder climates, heat build-up in an attic causes snow to melt and run down where it freezes at the eaves, causing destructive ice damming.

Solar Star:

- Reduces heat build up.
- Reduces air conditioning costs.
- Prevents ice damming.

Solar Star Roof Mount Vent and Gable Fan draws hot air and moisture out of the attic and discharges it to the exterior.

Battle Moisture.

Many of today's houses have insufficient ventilation and air exchange. This causes high humidity levels from everyday activities. This moisture migrates through the ceiling towards the roof where it comes in contact with the cold structure. Here, ice and frost form, causing damage to your roof structure. Additionally, moisture can saturate insulation, promote fungal decay and plywood delamination.

Solar Star:

- Reduces damaging condensation.
- Protects insulation from moisture saturation.
- Fights mold and fungal decay.
- Reduces heating costs.

Solar Star's Roof Mount Attic Fan Is The Ideal Ventilation Solution.

Solar Star, the leader in solar powered attic ventilation, brings you the most technologically-advanced, environmentally-friendly, ventilation solution today. Best of all, Solar Star brings you the solutions that cost nothing to operate. Imagine the savings.

By placing the unit where it is most effective, the highest point on the roof, it can properly circulate air and ventilate your attic space, transforming your home into a comfortable living environment. Powered by Solar Star's proprietary 10-watt solar panel, this breakthrough product has been designed to last season after season.

Solar Star Roof Mount Vents:

Low Profile

*This sleek, unobtrusive design is for most roof applications.

Pitched

It's a great alternative for north facing roofs when you need to improve exposure to the sun. It's ideal for tile roofs when used with the self-flashing Tile Roof Add-on Kit (sold separately).

High Profile

*This discreet, aerodynamic design is perfect for locations with heavy snow loads. It's also another option for tile roofs when "mudding in" is preferred.

*Meets Florida Building Code FL3269 and FL7819

Also Available In A Gable Fan Design.

The Solar Star Gable Fan can be affixed to the inside face of any existing gable vent. Powered by Solar Star's proprietary 10-watt solar panel, this gable fan requires NO electrical hook-up, NO electrician and requires NO cost to operate.

- Whisper quiet motor.
- Installs in less than 30 minutes.
- Includes 15' cable for convenient placement.
- Powered by remote photovoltaic power source (included).

Unit comes fully assembled and installs in less than 30 minutes.

No costly electrical hook ups because it's powered by the built-in photovoltaic power source.

Whisper quiet motor.

Stainless steel mounting screws.

Non-corrosive and durable polymeric integral exhaust screen.

Lightweight polymeric fan blade minimizes motor resistance and is non-corrosive.

Leak-proof, seamless one-piece flashing.
